**On the Spanish Ichneumoninae Stenopneusticae  
of the National Muséum d'Histoire Naturelle of Paris  
(Hymenoptera, Ichneumonidae)**

J. SELFA

**Abstract:** 65 Spanish (sub)species of Ichneumoninae belonging to the Muséum National d'Histoire Naturelle of Paris are studied. *Ulesta* CAMERON 1903, *Anisobas parviceps* THOMSON 1888, *Ctenichneumon funereus* (GEOFFROY in FOURCROY 1785), *Platylabops apricus* (GRAVENHORST 1820) and *Ulesta perspicua* (WESMAEL 1857), are recorded for the first time in Spain.

**Introduction**

The collection of Ichneumonidae kept in the Muséum National d'Histoire Naturelle of Paris (France) is partially disordered, however the specimens are preserved on good conditions.

The Spanish species of Ichneumoninae are distributed on the next collections: Ch. Alluaud, E. André, R. Benoist, R. de Buysson, J. de Gaulle, Ch. Grauger, P. Lesne, J. Pérez, A. Seyrig and O. Sichel.

The material studied in this work belongs to 4 tribes, 28 genera and 65 (sub)species. One genus and four species (\*) are new for the Spanish fauna: *Ulesta* CAMERON 1903, *Anisobas parviceps* THOMSON 1888, *Ctenichneumon funereus* (GEOFFROY in FOURCROY 1785), *Platylabops apricus* (GRAVENHORST 1820) and *Ulesta perspicua* (WESMAEL 1857).

The species are listed in alphabetical order for the genera under tribal names. Each species has reference to: 1) the original combination and 2) the original label data, indicating parenthetical some removed data too.
